

Lumetra Healthcare Solutions drives the advancement of healthcare business through evidence-based, sustainable solutions and technology. We provide reliable professional services and solutions through integrated clinical, technological, and analytic expertise – transforming the delivery and administration of healthcare.

SUSTAINABLE SOLUTIONS

We build solutions to complex healthcare projects by providing a range of services, including information technology strategies and business planning, product strategies and implementation, and program development and management.

LUMETRA HEALTHCARE SOLUTIONS CAN HELP YOU

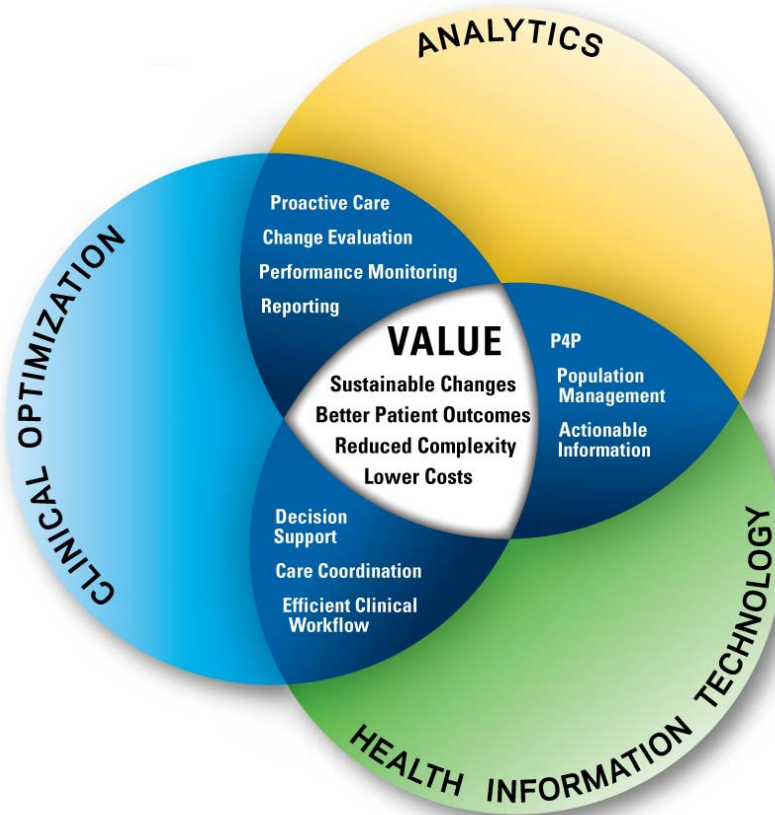

- Direct program management and evaluation for projects that include multiple organizations and complex technology implementations through specialized data analysis.
- Manage Health Information Technology (HIT) project implementations that provide for physician practice adoption, minimize legacy systems deficits, support system configuration to sustain clinical processes, and promote stimulus funding eligibility.
- Design benchmarking and reporting models through data analysis and the development of clear, concise, and attractive customized reports for providers/clients to use in their performance assessment and quality improvement efforts.
- Design a value-based program to improve patient care and decrease costs.

OUR QUALIFICATIONS

- Our experience of 25 years working with hospitals and physicians means we understand the challenges and complexities of process integration that is necessary in integrated healthcare systems, academic medical centers, and service line-based programs.
- Lumetra Healthcare Solutions excels in establishing program management and defining and implementing management practices to support complex healthcare initiatives
- HIT project management, including the implementation of Electronic Health Records (EHRs) and practice management software.

HEALTH INFORMATION TECHNOLOGY	ANALYTICS
<ul style="list-style-type: none"> • Help with physician adoption • Legacy system deficits limit reporting, decision support, population management, P4P • System configuration conflicts with business and/or clinical processes • Preparation for eligible stimulus dollars 	<ul style="list-style-type: none"> • Outcomes research using data driven analysis and findings • Want increased revenue for incentive programs • Evaluate and quantify program ROI • Extracting data from systems for specific needs (e.g. P4P, reporting)
CLINICAL OPTIMIZATION	
<ul style="list-style-type: none"> • Need efficient and cost effective independent medical review • Need help with performance improvement / having better outcomes, indicators that are really low • Want to align clinical workflow with business processes and technology • Want to identify and correct inefficiencies in care, processes, and patient safety 	

OUR APPROACH TO REDUCE COMPLEXITY & COST
